+34 613 016 795 | Barcelona, Spain

Professional Summary

Results-driven Backend Engineer with 3+ years of experience specializing in resilient microservices for high-traffic environments. Proficient in **Kotlin, Java, and Spring Boot**, with a focus on **Hexagonal Architecture, DDD, TDD and AI-assisted development**. Strong foundation in lower-level backend fundamentals (Protocols, Async I/O) and proven track record of migrating legacy systems and implementing complex business logic in distributed architectures.

Transitioned from a background in **Civil Engineering**, bringing a rigorous, structural approach to software reliability and system design. My objective is to add value by fostering growth and achieving impactful results, guided by my **core values: honesty, respect, commitment, and positive attitude**.

Work Experience

WORK EXPERIENCE

Backend Engineer | Adevinta Real-Estate | May 2022 – Present

- **Legacy Migration & Architecture:** Engineered an **Anti-Corruption Layer (ACL)** to bridge legacy real-estate models with a new microservices ecosystem, handling **25 req/s** via REST and XML processing with zero downtime.
- **Performance Engineering:** Optimized system throughput by fine-tuning **HikariCP** and database connection pools. Leveraged **Kotlin Coroutines** for asynchronous image/video processing, significantly reducing I/O latency.
- **Strategic Domain Design:** Led the technical analysis for a multi-tenant "Franchise" model, designing a **Publisher Wrapper** solution that synchronized state across Statistics, Billing, and Notification bounded contexts.

- **Modern DevOps & AI:** Maintained a **Direct-to-Production** workflow (no Staging/Dev) through a robust **Test Pyramid** and **Feature Flags**. Integrated AI-powered testing and prompt engineering to accelerate the development lifecycle.
 - **Product Growth:** Architected a new marketing product within a distributed ecosystem, ensuring strict data consistency for customer balances under tight deadlines.
-

Technical Skills

- **Backend & Systems:** Kotlin (Coroutines), Java, SQL, OS Fundamentals (Threads, Processes, Async I/O), Protocols (HTTP/3, gRPC, WebSockets, TLS 1.3).
 - **Architecture:** Hexagonal, Microservices, DDD, SOLID, Design Patterns.
 - **AI for Engineering:** AI Coding Assistants, Prompt Engineering for Devs, AI-powered QA.
 - **Infrastructure:** AWS (EKS, S3, SQS), Docker, Kubernetes, Kafka, GitHub Actions.
-

CERTIFICATIONS & EDUCATION

- **AI4Devs Program (80h Specialization)** | LIDR Academy | Dec 2025
 - *Focus: AI-powered Backend/DevOps, Prompt Engineering, and End-to-end AI project.*
 - **Fundamentals of Backend Engineering** | Udemy | 2024
 - *Deep dive into OS Kernel communication, communication design patterns, and QUIC/0RTT.*
 - **Design Patterns in Java (GoF)** | Udemy | 2024
 - *Mastery of Creational, Structural, and Behavioral patterns with modern Java implementation.*
 - **Full-Stack Web Development Bootcamp** | Factoria F5 | Barcelona | 2022
 - **Degree in Civil Engineering** | Córdoba National University | Argentina
